Facundo Sorasio

Computer Engineering Student · Full-Stack & Mobile Developer

facusorasio@hotmail.com | WhatsApp: +54 2477 624468 | github.com/facusora01 | facusora01.github.io/WebCV

PROFILE

Computer Engineering student focused on software development and algorithmic logic. I specialize in building functional web and mobile applications end-to-end, from React/Next.js and Flutter frontends to Node, Express and FastAPI backends deployed on Linux servers. Experienced with locally-run AI systems, bots and full-stack product delivery.

SKILLS

Languages	JavaScript, TypeScript, Python, Java, C++, C#, HTML/CSS
Frontend	React, Next.js, Tailwind CSS
Backend & Data	Node.js, Express, FastAPI, PostgreSQL, SQLite, Firebase
Mobile & Desktop	Flutter, Electron
DevOps & Tools	Docker, Linux, Git, SSH

EXPERIENCE

SaaS & Product Development 2026
Designed and shipped full-stack SaaS web apps from concept to deployment; implemented authentication, scheduling and real-time features for end users.

Mobile Development (Flutter) 2025
Built cross-platform Android/iOS apps with Flutter, including a management app for agricultural/livestock operations.

AI & Bot Engineering 2024
Trained an F5-TTS voice model (Argentine accent) and built conversational assistants with Ollama (llama3.2); developed and deployed Discord/WhatsApp bots on a Linux server.

Full-Stack Development 2024
Built web apps with React/Next.js, Node/Express and SQLite/PostgreSQL; deployed FastAPI backends on Linux via SSH with JWT auth; implemented data visualization and admin panels.

DevOps & Linux Infrastructure 2024
Deployed and managed backends on Linux servers via SSH; configured web admin panels, scheduled automated jobs and remote service workflows.

Database Design 2024
Designed relational schemas with PostgreSQL and SQLite; modeled entities, relationships and normalization; wrote queries for full-stack applications.

Software Engineering (Java) 2024
Collaborated on Java application development; implemented business logic, UI components and Test-Driven Development for code quality.

Frontend Web 2023
Developed and maintained web projects; collaborated on new features and optimized performance and frontend responsiveness.

Backend & Automation (Python) 2020
Assisted in developing client websites and created automated scripts to streamline workflows within a team.

EDUCATION

Computer Engineering — University of Buenos Aires (UBA) 2020 – Present

SELECTED PROJECTS

ShapeShifter AI / Bot
Discord bot with AI voice cloning (F5-TTS) and an Ollama-powered conversational assistant.

AgroScanner Mobile / IoT
Flutter app with Python/FastAPI backend and JWT auth; RFID animal registration and tracking.

Amankay Web Full-Stack
React + Express + SQLite app with Recharts data visualization; deployed on Linux via SSH.

TiendaVehiculos Web
Next.js vehicle e-commerce with authentication and Mercado Pago payment integration.

LootMarket E-commerce / Security
P2P gaming marketplace (React, Node/Express, PostgreSQL) with escrow and dispute resolution; security-hardened DB with RLS/ABAC, encryption at rest and forensic auditing.

Appointa Web
Appointment and booking management app for shops and independent professionals.
